

TYLA UNIFORM AND EQUIPMENT CARE GUIDE

If your equipment doesn't fit properly, or is damaged or coming apart, request an equipment change from your Area Equipment Manager or the TYLA Equipment Manager.

UNIFORM

Jersey, shorts and skirt: Clean by machine-washing with liquid detergent in cold water; line dry. We would greatly appreciate your doing this before returning uniforms at the end of the Spring Competitive Season.

EQUIPMENT

Helmet and chin strap; goalie throat protector and shin guards: Clean by hand washing inside and out with liquid detergent and rinsing with warm water; line dry.

Remove adhesive residue or paint from helmet shell exterior using mineral spirits, e.g., varsol or turpentine. Do not use abrasive cleaner. The Area Equipment Manager can help if necessary.

Repairs should be performed by the Area Equipment Manager or coach (they have the correct nuts, bolts, snaps and velcro).

Shoulder, arm and rib pads; gloves; and girl's goalie girdles: Clean by machine-washing with liquid detergent in cold water; line dry.

Velcro closures: If velcro stops working, try hand combing it with a large pin, small crochet hook or nut pick.

Goalie chest protector: TYLA will maintain.

Goggles: Clean by hand washing with a small amount of mild soap solution and rinsing with warm water; line dry.

Replacement: Have the Area Equipment Manager change the padding when it becomes frayed or otherwise damaged.
